

Business Analyst

A Business Analyst (BA) is a professional who acts as a bridge between business stakeholders and technical teams, ensuring that the organization's business needs are identified, analyzed, and met through effective solutions. They play a crucial role in understanding business requirements, defining objectives, and creating data-driven strategies to improve processes, systems, and overall organizational performance.

Skills Required for a Business Analyst

Technical Skills:

1. **Business Analysis Tools:**

- Proficiency in tools like JIRA, Confluence, and Microsoft Visio.

2. **Data Analysis:**

- Knowledge of SQL, Excel, and BI tools like Tableau or Power BI.

3. **Modeling Techniques:**

- Experience in creating flowcharts, wireframes, and business process models.

4. **Project Management:**

- Familiarity with Agile and Waterfall methodologies.

5. **Reporting:**

- Ability to prepare and present detailed reports to stakeholders.
